CHORD

Say hello to the future of music.

Chordette.

On your phone!

The future of music is here. Say hello to Chordette Gem. Connected to your amp via two gold plated RCA phono sockets, it transforms your Bluetooth enabled phone, PDA or personal computer into a high quality audio source. Audio stored on these devices can now be played on your hi fi system, wirelessly, with superior to CD audio quality. With a range of 30 meters, you can use it virtually anywhere in the home. Chordette Gem gives you much better listening quality than the analogue audio ouputs from normal Bluetooth devices. This is because its custom designed Bluetooth receiver works with the typically unused digital audio information on your Bluetooth device and processes it using a high quality digital to analogue converter. Eminently affordable, Chodette Gem also offers the option of connecting your PC through a USB port to play back music.

So, are you ready for the future of music? Bid those discs farewell. And welcome Chordette Gem into your life.
